And his theme is from paradise to Gaza, the big picture his Big Picture of History lessons for today. Thank you very much. We all know that, history and science and our present, reality has been falsified, since long. And my endeavor during the last 10, 12 years has been to try to rewrite history and arrive at the version that can be acceptable for many people. Once that version has this acceptance, the immediately immediately following next step would I can't the lights are a bit sorry.

The the next the next step would be to make, educational modules as to try to correct all this falsity. And, the title of the book, I've written is, The Predators versus the People, the big picture of the 500 year secret war against humanity. And, it's a it's a story about evil versus good. They, we all know the metaphor of the tree of knowledge of good and bad. And there is a tree, there is a snake, and they all belong to the creation, to God's creation as you would like to call it.

And I think it was on purpose. Evil if God is almighty, he could have created the world without evil, but there is evil in this world. And I think it's because, it that gives a strong challenge to us. Without evil, we would be spending our, our own lives as consumers, and and we would not get to a level of of spiritual development as we are all have been experiencing, I'm sure. So, this the knowledge of good,

came the knowledge of evil and the knowledge of good, permitted, the the development of technologies for international trade that was already 1000 of years ago going on.

The international trade, slaves, bullions, spices, luxury products, allowed, accumulation of capital everywhere in the, world as it was then. So Asia, parts of Africa, and Europe had saw this accumulation, that is effect the pre capitalism. So the availability of large capitals to do projects that normally are not possible under a organic growing society. Take the discovery of the world, take the colonization of the world, the development of industry and technology, this all depends on capital. And capital, as I said, was present in several locations, but only in Europe.

It resulted in the the, the domination of, in an attempt to dominate the the globe. And why was that? And the most probable explanation is that Europe was at a point of nation, state formation. That was not by accident. I can't go into detail now, but there were starting up nation states that were used by the capital owners.

And then we see that the fusion of capital and government is the key element in this whole project, and it started 500 years ago or 600 years ago in Spain when the bankers of Renoir, found out they could control Spain through capital, through financial, assistance. And, from there, they went on to Protestant Holland and Protestant England. And in the meantime, a Protestant United States was created. And, these were the, hegemonic states that, let this effort. That creates the image, for many people that the empire as we have

it now, and as we had it was a British empire or a Dutch empire even, or Spanish.

But no. The empire is not bound to any country or religion or ethnicity or or anything. It's just a group of very rich people that will want, to protect their wealth, in such a way that the end justifies all means. And they use evil, and demons, as has been said before, and techniques of even black magic, to control us and to influence us spiritually or even kill us spiritually as they have tried with the enlightenment where the higher spheres are declared nonexistence. Only what can be measured is of value in a system of materialist science.

Now the last cycle, the American cycle has been brought in its final phase already in 1971 with the dollar, getting off gold and some other, measures. And China has been built up for more than a century to take over. So the this is presented under the, beautiful brand of, multipolar society, but long we soon get fall in that trap. It's the same old project in new shoots and, with new colors. China will now be the willing executioner of, of this project.

The the other aspect in in our time is, of course, the the implementation of global digital digital prison. That is because the proxy system that they have developed where they have captured all countries over the centuries is becoming much too complicated and convoluted. And from from their their, effort to, develop technology that's has been going on for 60, 17 years at least. And that brings us in their end game. What can we do?

I think one of the most important aspects is to to create awareness in more people. But as long as this project is not known by the majority of the people, it will continue. And, another very important point is that we regain our our spiritual roots. It could be through Christianity. It could be through other forms of religion, even Taoism, which I know because my wife is deep in it, and I don't, in the end, see any difference or of, on on how that works out on the spiritual level.

So I think this gives you an impression. There is much more to say, but I will, leave it here.
